

DEEPAK SAHU

MERN Stack Developer | Node.js | Express.js | React.js | MongoDB

Indore, Madhya Pradesh, India | +91 8516926355 | developerdeep1@gmail.com | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

MERN Stack Developer with 1.5 years of experience specializing in backend development using Node.js, Express.js, MongoDB, and REST API development. Experienced in designing scalable backend systems, JWT authentication, Socket.IO, MVC architecture, and API integration, with a strong focus on building reliable and maintainable backend applications

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Core Java, SQL

Backend: Node.js, Express.js, REST API Development, JSON Web Tokens (JWT) Authentication, Socket.IO, MVC Architecture, Role-Based Access Control

Database: MongoDB, Mongoose, MySQL, Schema Design, Aggregation Pipelines, Indexing, Query Optimization

Frontend: React.js, HTML5, CSS3, Bootstrap

Tools & Platforms: Git, GitHub, Postman, VS Code, Render, MongoDB Atlas, Brevo SMTP, Cloudinary

Other: API Testing, Server Deployment, Debugging, Performance Optimization

PROFESSIONAL EXPERIENCE

- Backend Developer (Full Stack)** | *Young Decade IT Software Solution, Indore* **Nov 2024 – Present**
- **Designed and developed scalable REST APIs** using Node.js and Express.js for production client applications.
 - **Designed normalized database schemas** in MySQL with optimized queries for high-traffic admin operations.
 - **Implemented authentication and authorization** with role-based access control for admin and sub-admin accounts.
 - **Built admin-specific modules in Express.js** following MVC architecture for scalable, maintainable backend code.
 - **Handled API integration between backend services and React.js dashboards** to deliver complete end-to-end features.
 - **Deployed and maintained backend services in production environments** while monitoring API reliability and performance optimization.
 - **Collaborated using Git and GitHub through feature branches and pull requests**, with code reviews to ensure reliable delivery.

PROJECTS

- Happiness India – Multi-Vendor Food & Grocery Delivery App**
Tech Stack: Node.js, Express.js, MySQL, REST API, Notifications
- **Developed backend APIs** to manage multi-vendor catalogs, order workflows, and delivery partner operations.
 - **Designed order lifecycle management** with status stages (pending, preparing, ongoing, delivered) for real-time tracking.
 - **Built a broadcast notification system** enabling admins to send targeted announcements to selected user groups.
 - **Implemented dynamic delivery-charge logic** configurable by city and zone, with role-based access for vendor and delivery partner approvals.
 - **Structured MySQL schemas** for vendor menus, grocery inventories, and real-time order data.

Cafe Cruisers – Ride Management Platform

Tech Stack: Node.js, Express.js, MySQL, REST API, JWT, React.js

- **Built secure, scalable RESTful APIs** in Node.js and Express.js to support Rider and Member roles across connected mobile applications.
- **Designed trip lifecycle workflows** covering trip creation, rider acceptance, and member joining with fee-based participation logic.
- **Implemented geofencing-based alerts** using latitude/longitude proximity checks to trigger real-time notifications between riders and members.
- **Integrated the Google Places Autocomplete API** for accurate, structured address entry during trip creation.
- **Designed normalized MySQL schemas** for users, trips, and bookings with query optimization for fast lookups.
- **Built admin-level controls** for rider approval, payment verification, and trip schedule management, exposed via a role-based API layer.

Split Your Trip

Personal Project

Tech Stack: Node.js, Express.js, MongoDB, JWT, Socket.IO, Render

- **Built a complete backend** with MVC architecture for a group trip expense-management platform.
- **Implemented authentication with OTP-based email verification** for secure user onboarding and session handling.
- **Designed a settlement algorithm** to simplify group payments and minimize transactions needed to clear balances.
- **Built one-to-one real-time chat** with connection-based permissions restricted to users with an active trip relationship.
- **Added activity logs, notifications, and deep-link support** for in-app navigation and event tracking.
- **Optimized data access with aggregation pipelines and pagination** for large trip and transaction datasets, and deployed to production.

EDUCATION

Bachelor of Technology (B.Tech) – Computer Science

2019 – 2023

Shri Vaishnav Vidyapeeth Vishwavidyalaya, Indore | CGPA: 7.5

CERTIFICATIONS

Java Full Stack Certification – JSpiders, Bangalore

Completed: Sep 2024
